ISRF Program

Converting Google Forms Inputs into the New York State required ISRF:

Contact Info: Lucas Smith Is3586@columbia.edu

Introduction

A program to merge Google Forms to NYSED's ISRF.

Overview

- 1. Get student answers in a Google Form. The format of the forms matters. The questions in the beginning and end do not matter, <u>however</u> the middle questions/answers cannot change (i.e. you can add questions at the beginning and end, but not in the middle). If the middle answers change (sequence of questions), the program will not be able to run correctly.
- 2. Download as an Excel xlsx file.
- 3. Clean the Excel xlsx file data.
- 4. Create a folder of where you want the ISRF PDFs.
- 5. Run the program as instructed.

Excel Data Format

The current version of the program uses the first sheet of the excel file.

On notes:

Phone numbers should be ten-digit US phone numbers without a country code.

<u>Dates of Birth's</u> year should be within the range of 1900 to the current day. <u>Common errors</u> here are students putting the current date and not their birthday. Additionally, some errors (rare) that I have seen are dates that are very old (18xx); I do not know how this is happening but probably an error with Google. For both types of errors, place the person on a separate tab and don't run the program with their information, or if you are confident, you know their date, change it. Otherwise, wait to run it with their information until you have the proper info.

Emergency contact name: sometimes students put a phone number in this field and not a person's name.

The format of the columns in the excel, should start from column A to AD:

(<u>note</u>: this is why I say the beginning and end questions of the Form don't matter. What you will do is delete those columns from the excel; as long as columns A to AD are in the order below, any other columns don't matter and won't affect the program).

- A. Timestamp
- B. First name
- C. Last name
- D. Birthdate
- E. Today's date
- F. Address
- G. City
- H. Live in NY state (yes/no)
- I. Zip code
- J. Mobile phone number
- K. Landline
- L. Email
- M. Emergency contact name
- N. Emergency contact phone
- O. Gender
- P. Hispanic/Latino/Brazilian identification (yes/no)
- Q. Ethnicity
- R. Working description
- S. US studies as a child
- T. Highest grade completed in US
- U. Highest grade completed in NY
- V. If studied in NY, last school's name
- W. Received a HS diploma (yes/no)
- X. Received a university diploma (yes/no)
- Y. If did not finish HS, how many years study at school?
- Z. Caring for children <21
- AA. Single parent identifier
- AB. Children 0-4 declaration
- AC. Children 5-10 declaration
- AD. Children 11-13 declaration
- AE. Children 14-18 declaration
- AF. Learning barriers declaration

The reason columns for the form can be added before and after this strict sequence of columns is that before you run the program you can save the excel as a copy (or use the original) and delete the extra columns you added before the above set of columns. Columns after AD above are not implemented in the program and the program does not see any column after AD (so you can use them freely without worry that the program will mess up).

The general formatting makes general sense. Formatting the above columns is here:

- A. Timestamp
- B. First name
- C. Last name
- D. Birthdate: auto formatted with Google, but ensure is proper: mm/dd/yyyy
- E. Today's date: taken from the timestamp, and is auto formatted with Google mm/dd/yyyy
- F. Address: **111 StreetName Road** separated with spaces.
- G. City: Just the city, but if they make an error that is also ok.
- H. Live in NY state (yes/no): Binary question either yes or no
- I. Zip code: XXXXX 5-digit number only; if they put spaces before/after that is ok
- J. Mobile phone number: see phone number requirements
- K. Landline: see phone number requirements
- L. Email: no requirements
- M. Emergency contact name: no requirements
- N. Emergency contact phone: see phone number requirements
- O. Gender: use options provided in the Google Form.
- P. Hispanic/Latino/Brazilian identification (yes/no): Binary question either yes or no
- Q. Ethnicity: see ethnicity requirements
- R. Working description: see working description requirements
- S. US studies as a child: Binary question either yes or no
- T. Highest grade completed in US: **number only** (11, not 11th)
- U. Highest grade completed in NY: **number only** (11, not 11th)
- V. If studied in NY, last school's name
- W. Receive a HS diploma
- X. Receive a university diploma
- Y. If did not finish HS, how many years study at school? number only (11, not 11th)
- Z. Caring for children <21: Binary question either yes or no
- AA. Single parent identifier: Binary question either yes or no
- BB. Children 0-4 declaration: **number only**. Word in place of number (i.e. "eleven") is not supported.
- AA. Children 5-10 declaration: **number only.** Word in place of number (i.e. "eleven") is not supported.
- AB. Children 11-13 declaration: **number only**. Word in place of number (i.e. "eleven") is not supported.
- AC. Children 14-18 declaration: **number only.** Word in place of number (i.e. "eleven") is not supported.
- AD. Learning barriers declaration: use the form's descriptions.

Below is an example of the excel sheet. As you see, the information provided is ok; columns are added after AD; highlighting/formatting of cells is ok, as well as comments.

Running on Windows

Go to the command terminal: in the search bar you can type: **cmd** and open the application.

It will bring you to this screen

You need to go to the directory that contains wherever the ISRF information is (creating a separate folder somewhere that has **all** of the files in it is probably best.) If you are not too familiar with using the command terminal, I recommend putting the following files in a subfolder of the Downloads folder because, it is the easiest to navigate to.

Here's the layout you should use.

- Within the main file you are using.
 - o ISRF_V1 (10).pdf
 - o ISRFExcel.py
 - PersonObject.py
 - o v1_isrf.py
 - o A folder name to put the PDFs in [I used ESOL English ISRF Responses]

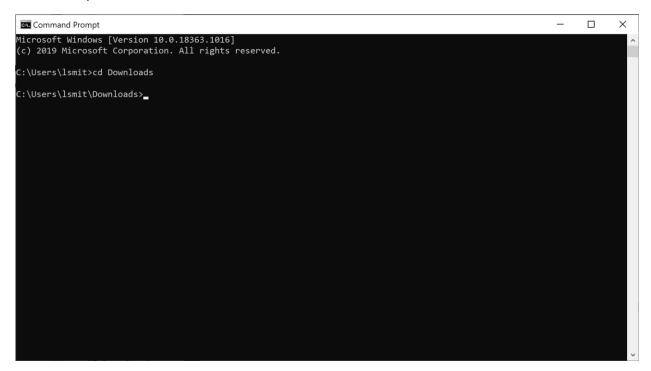

Excuse all the extra files in the example below, but if you see here the setup is as I described above.

Navigate with the command terminal to the downloads folder.

Using the command **cd Downloads**, sends you to "change [the] directory" to the Downloads folder (hence CD is used).

From there you are here:

Then change the directory again to the folder where you are holding everything: If I am holding everything in a folder called Test, then it will look like this:

```
Microsoft Windows [Version 10.0.18363.1016]
(c) 2019 Microsoft Corporation. All rights reserved.

C:\Users\lsmit\cdot\Downloads

C:\Users\lsmit\Downloads\test>____

C:\Users\lsmit\Downloads\test>____
```

If you want to make sure you are in the right folder, you can type **dir** which will show the directory of everything in the current folder. If I am in the Test folder as above, all of my files are there with another subfolder I made called "responses" where I will store all of the filled-out responses, once the program is run.

```

```

To run the program, you need to call python and then some arguments (telling python what it needs). The setup is:

python v1_isrf.py "EXCEL FILE OF THE RESPONSES.xlsx" folderWhereYouArePuttingPDFS theRowOfTheFirstStudentYouWantAnExcelFor EndingRowInExcelFile LanguageOfResponsesInAllCaps

After it will print the list of pdfs it is creating.

In this case we told the program that French was the language for the responses and it encountered an error where it did not find a learning barrier in French, from the responses. In a case like this you have to

enter the code that the corresponding phrase is. The code list is in the next section. The codes are pretty much the first letter of each word in the phrase.

```

                                                                                                            'EO', 'FC',
  , 'TANF', 'SP', 'HM', 'HM'])
ot recognized French learning barnier: English is NOT your first language. prease enter the code ma
```

Above ^ it was telling me learning barriers like "English is NOT your first language" as an unrecognized learning barrier because I told the program I was using French. You must tell the program the correct language. If there are any problems with languages, (i.e. you use French and the French phrase it not recognized), send an email to me (lucassmith.ci@gmail.com) so I can fix it.

Running on iOS/Mac

Code Designations (Ethnicities, Employment, Learning Barriers)

HOME	Homeless or living in a shelter
НМ	You used to take care of the home or children but now you must find a job.
D	Disabled

UE	Unemployed
UA	Not Available
	[for employment]

Function Calls Program Architecture

Possible Errors You Might Face

Some things you can check:

1. When you enter the excel file as an "argument" into the system, you give it quotes and label it as .xlsx

"ESOL Spanish Responses FA20.xlsx"

← correct

ESOL Spanish Responses FA20.xlsx $\leftarrow incorrect$, use quotes

Empty rows – won't run

Arguments must be exact rows (2-60)

Birthdays not formatted (wrong year)

Address

Improvement + printout +2 to show the row number. , show tally at end of all pdfs made (count)
